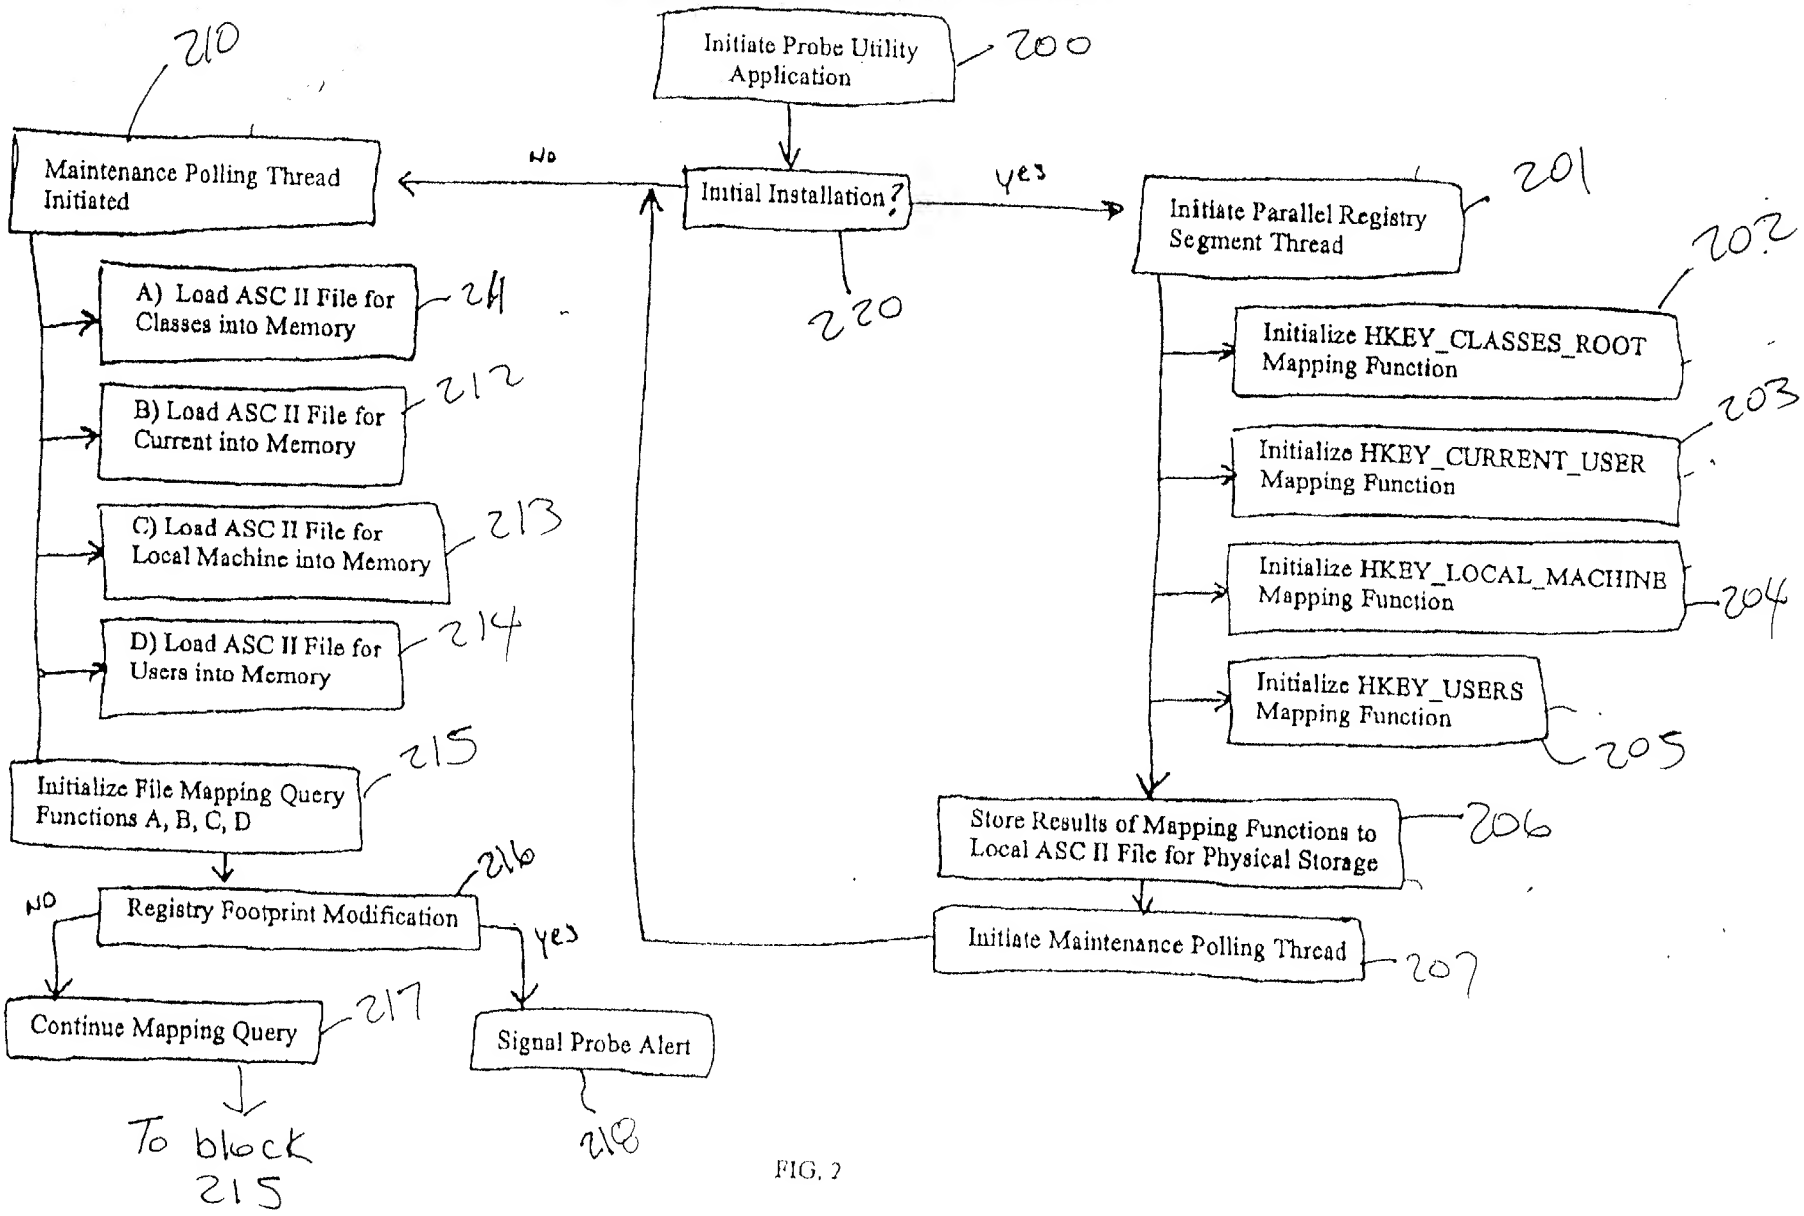
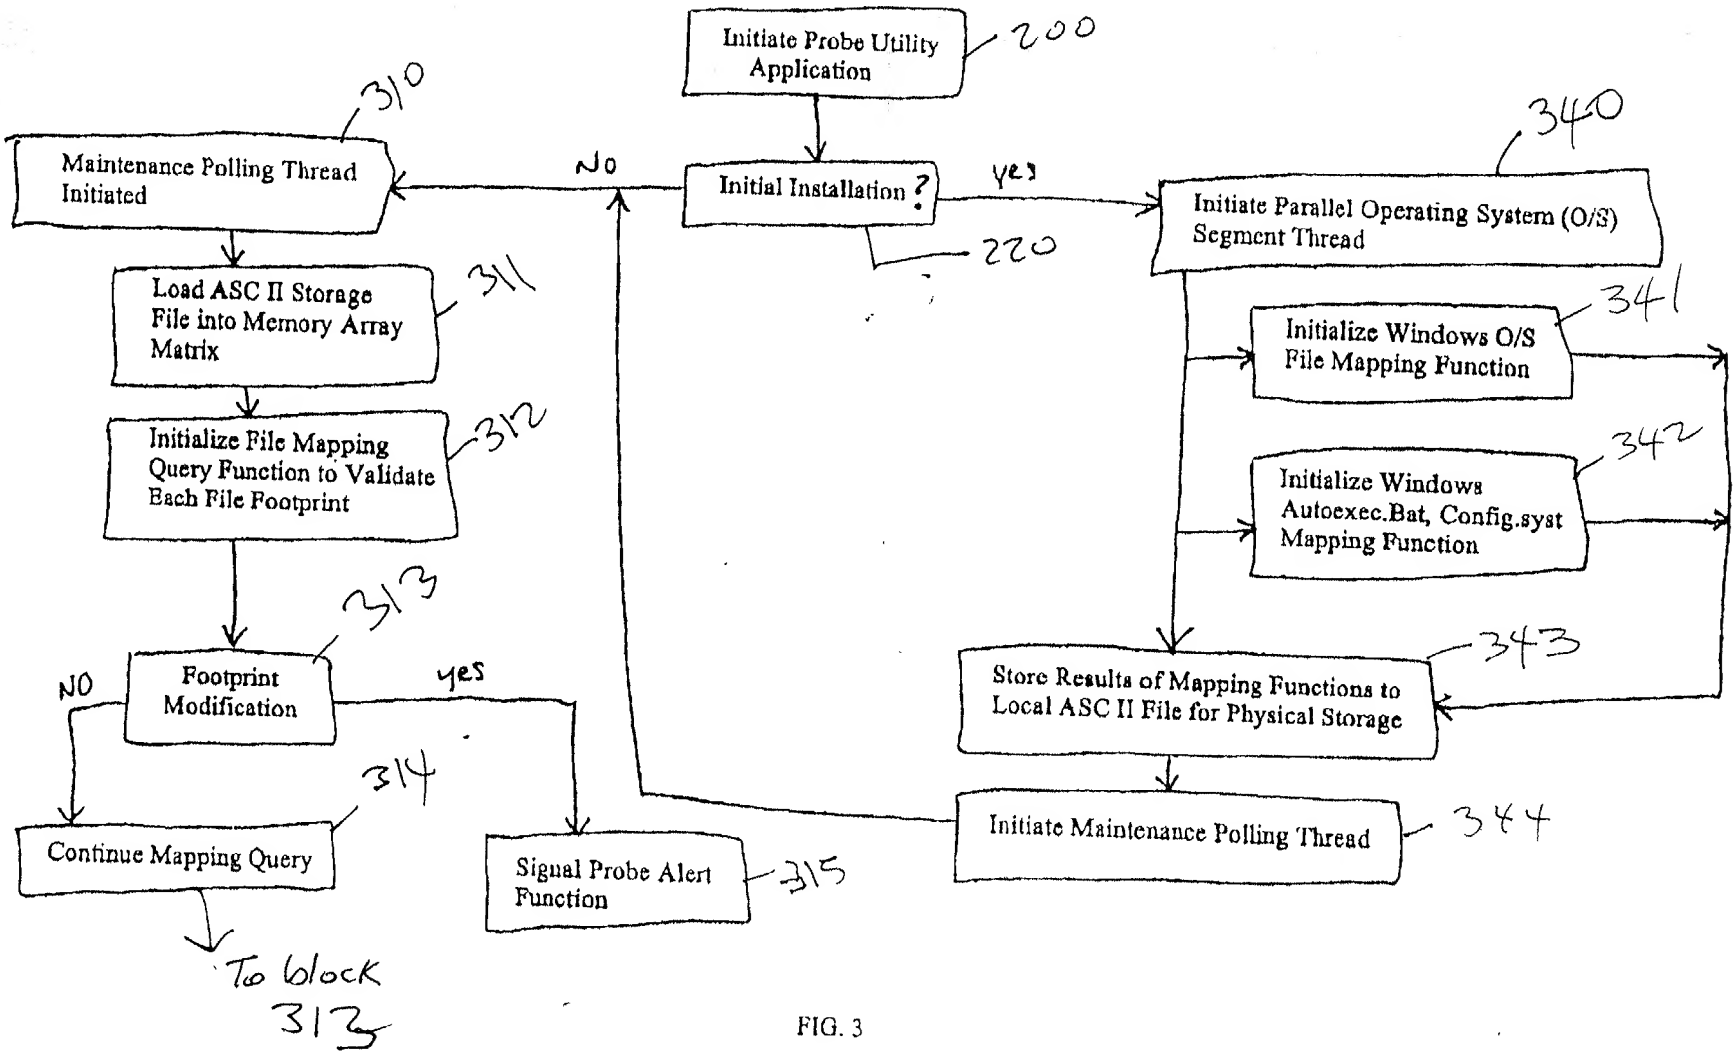
FIG. 1



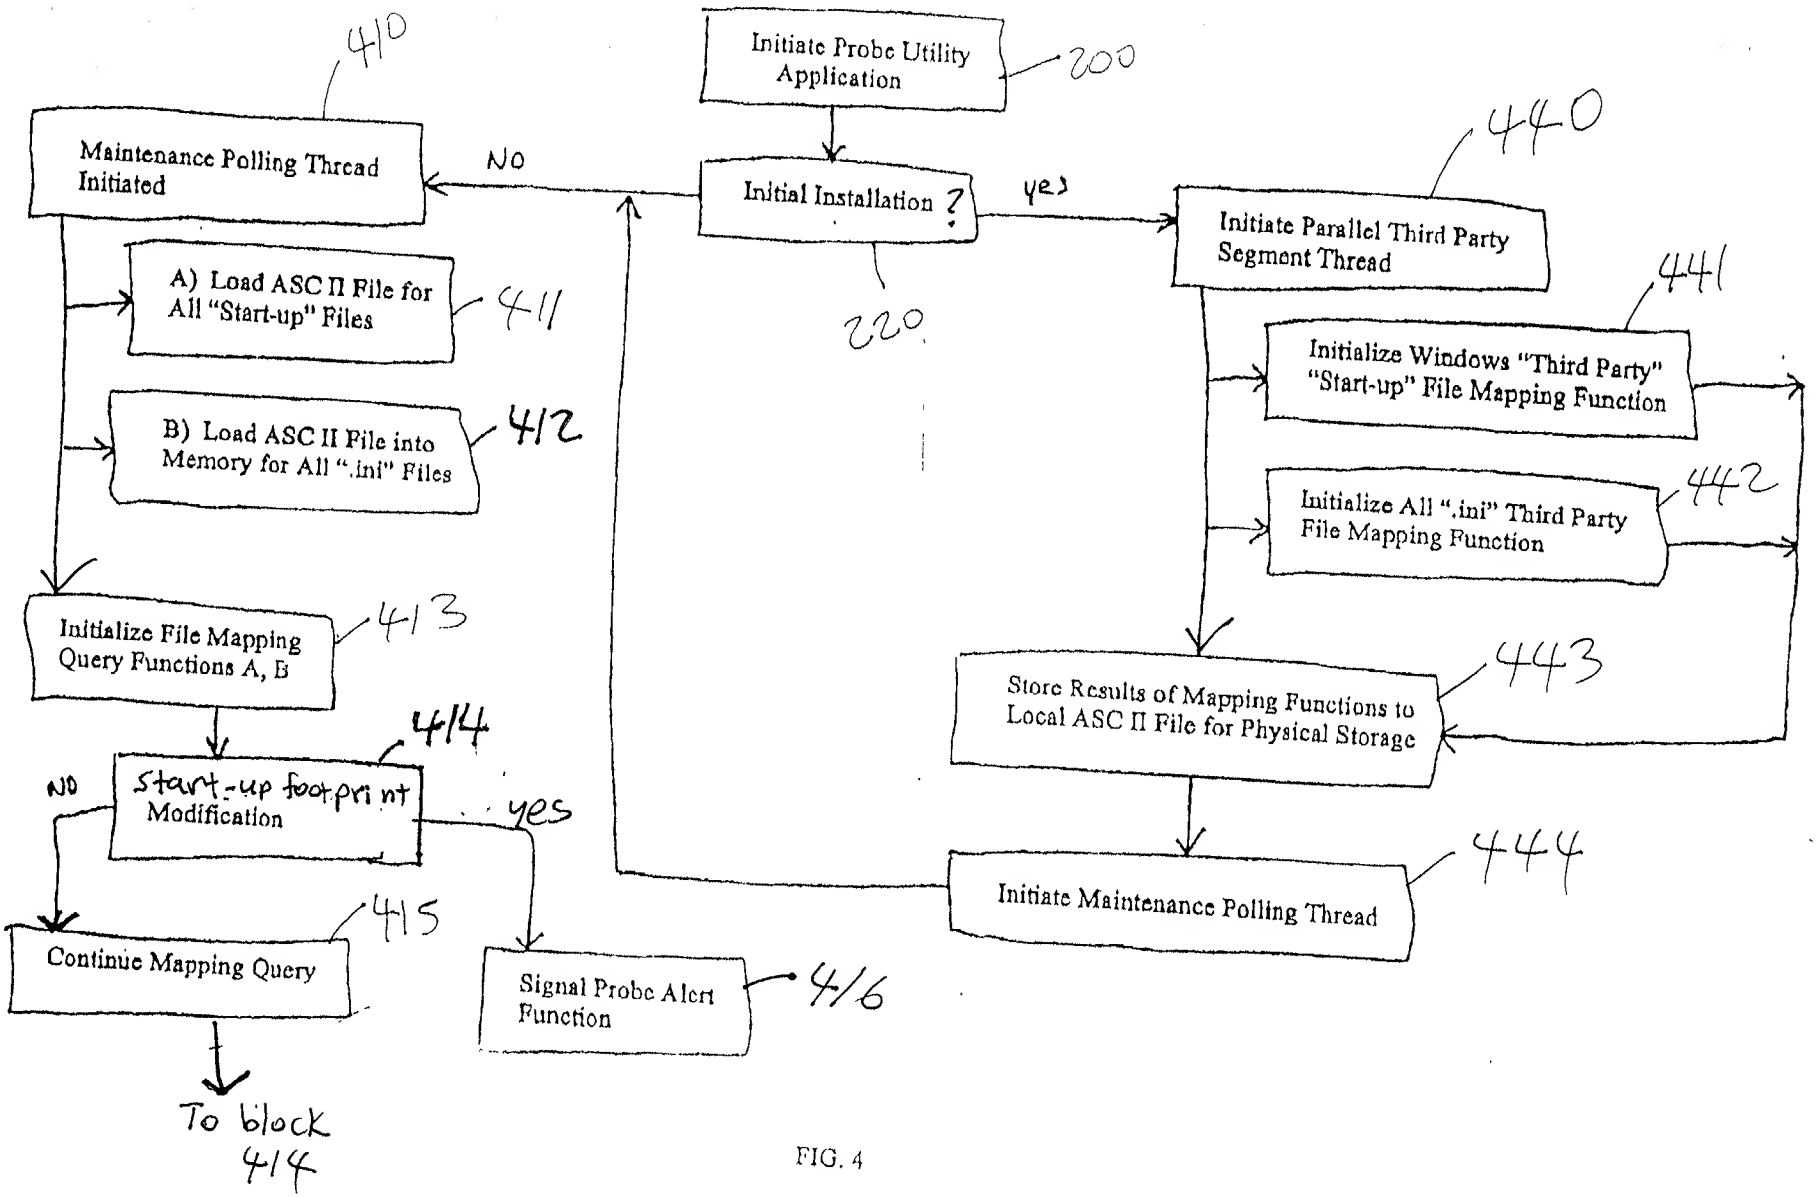
Initiate Probe Utility Application
200
Initial Installation?
220
NO
YES
Maintenance Polling Thread Initiated
210
A) Load ASC II File for Classes into Memory
211
B) Load ASC II File for Current into Memory
212
C) Load ASC II File for Local Machine into Memory
213
D) Load ASC II File for Users into Memory
214
Initialize File Mapping Query Functions A, B, C, D
215
Registry Footprint Modification
216
NO
YES
Continue Mapping Query
217
To block 215
Signal Probe Alert
218
Initiate Parallel Registry Segment Thread
201
Initialize HKEY_CLASSES_ROOT Mapping Function
202
Initialize HKEY_CURRENT_USER Mapping Function
203
Initialize HKEY_LOCAL_MACHINE Mapping Function
204
Initialize HKEY_USERS Mapping Function
205
Store Results of Mapping Functions to Local ASC II File for Physical Storage
206
Initiate Maintenance Polling Thread
207

FIG. 2



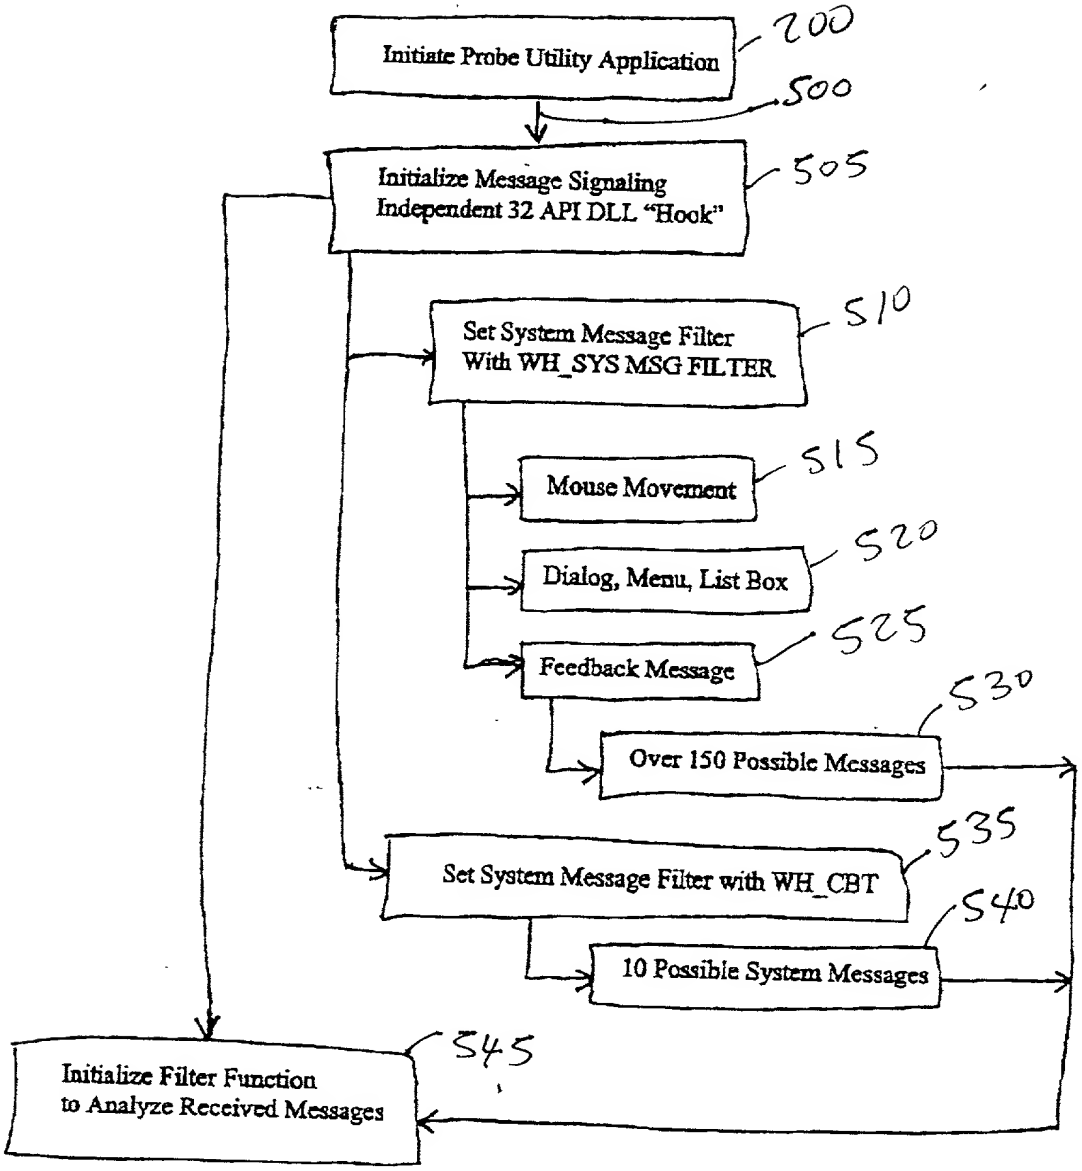
Initiate Probe Utility Application
200
Initial Installation ?
No
yes
220
Maintenance Polling Thread Initiated
310
Load ASC II Storage File into Memory Array Matrix
311
Initialize File Mapping Query Function to Validate Each File Footprint
312
Footprint Modification
313
NO
yes
Continue Mapping Query
314
To block 313
Signal Probe Alert Function
315
Initiate Parallel Operating System (O/S) Segment Thread
340
Initialize Windows O/S File Mapping Function
341
Initialize Windows Autoexec.Bat, Config.syst Mapping Function
342
Store Results of Mapping Functions to Local ASC II File for Physical Storage
343
Initiate Maintenance Polling Thread
344

FIG. 3



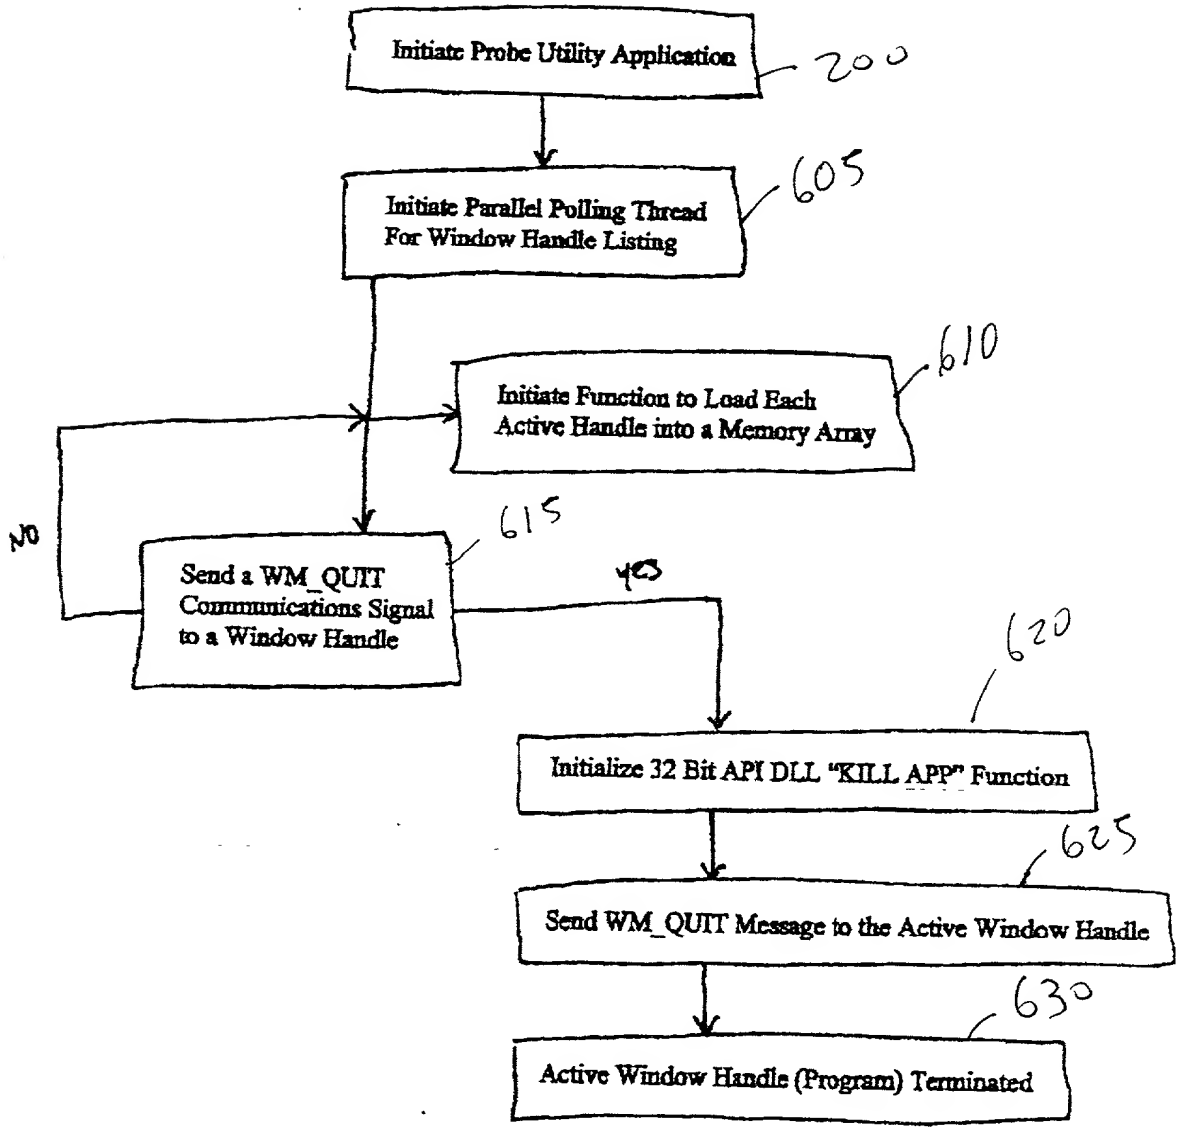
Initiate Probe Utility Application
200
Initial Installation ?
220
No
yes
Maintenance Polling Thread Initiated
410
A) Load ASC II File for All "Start-up" Files
411
B) Load ASC II File into Memory for All ".ini" Files
412
Initialize File Mapping Query Functions A, B
413
Start-up footprint Modification
414
NO
yes
Continue Mapping Query
415
To block 414
Signal Probe Alert Function
416
Initiate Parallel Third Party Segment Thread
440
Initialize Windows "Third Party" "Start-up" File Mapping Function
441
Initialize All ".ini" Third Party File Mapping Function
442
Store Results of Mapping Functions to Local ASC II File for Physical Storage
443
Initiate Maintenance Polling Thread
444

FIG. 4



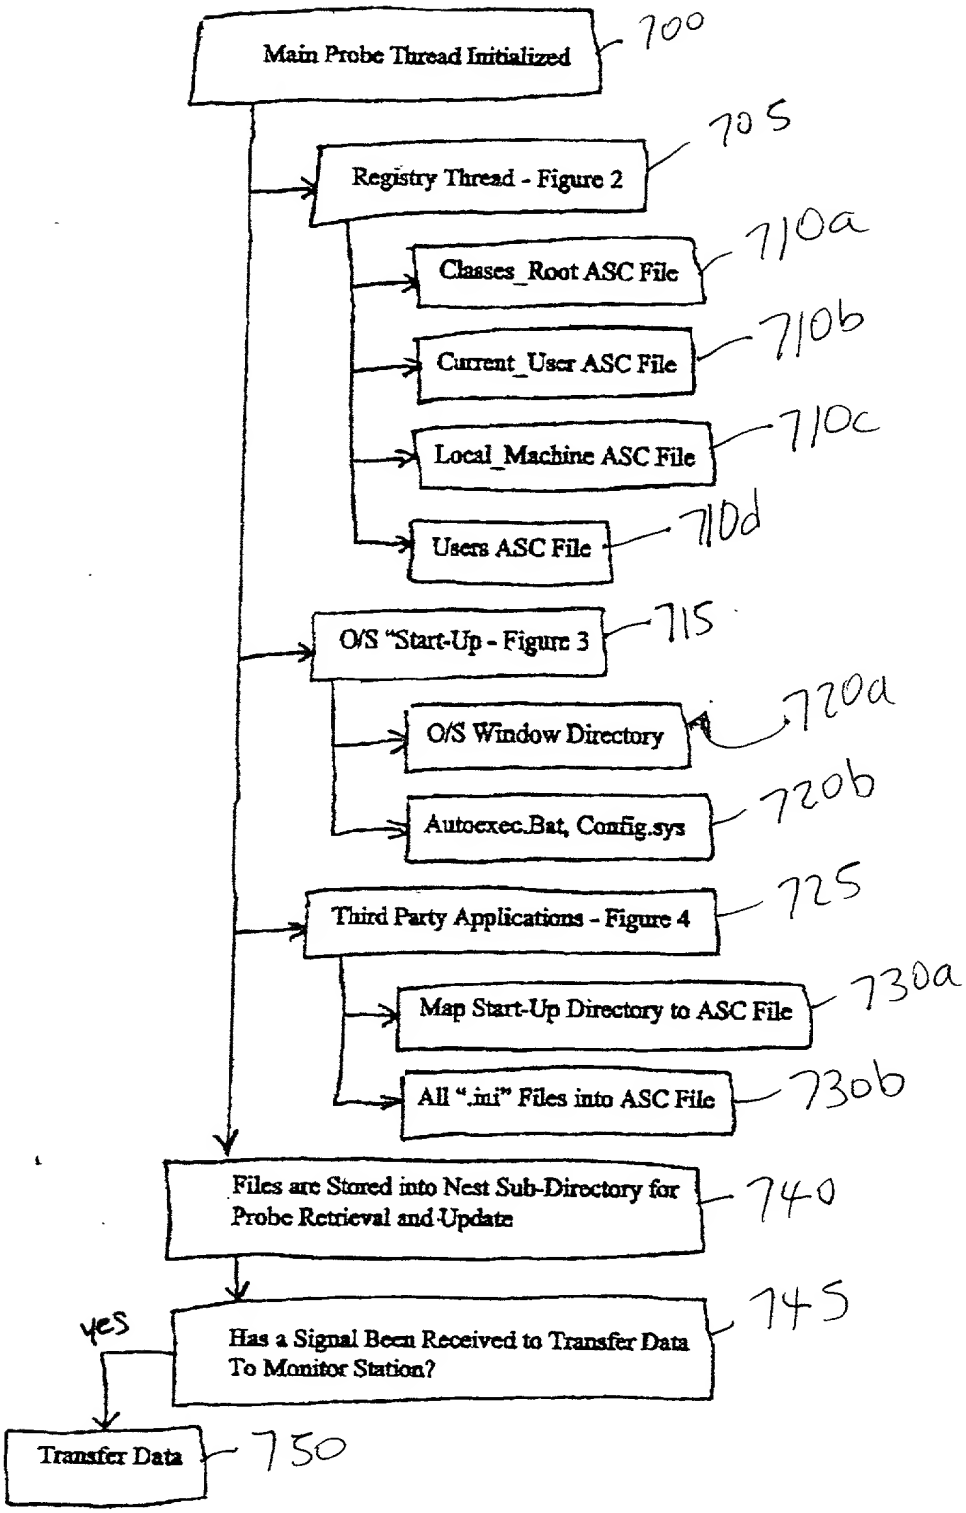
Initiate Probe Utility Application
200
500
Initialize Message Signaling Independent 32 API DLL "Hook"
505
Set System Message Filter With WH_SYS MSG FILTER
510
Mouse Movement
515
Dialog, Menu, List Box
520
Feedback Message
525
Over 150 Possible Messages
530
Set System Message Filter with WH_CBT
535
10 Possible System Messages
540
Initialize Filter Function to Analyze Received Messages
545

FIG. 5



Initiate Probe Utility Application
200
Initiate Parallel Polling Thread For Window Handle Listing
605
Initiate Function to Load Each Active Handle into a Memory Array
610
NO
Send a WM_QUIT Communications Signal to a Window Handle
615
YES
Initialize 32 Bit API DLL "KILL APP" Function
620
Send WM_QUIT Message to the Active Window Handle
625
Active Window Handle (Program) Terminated
630

FIG. 6



Main Probe Thread Initialized
700

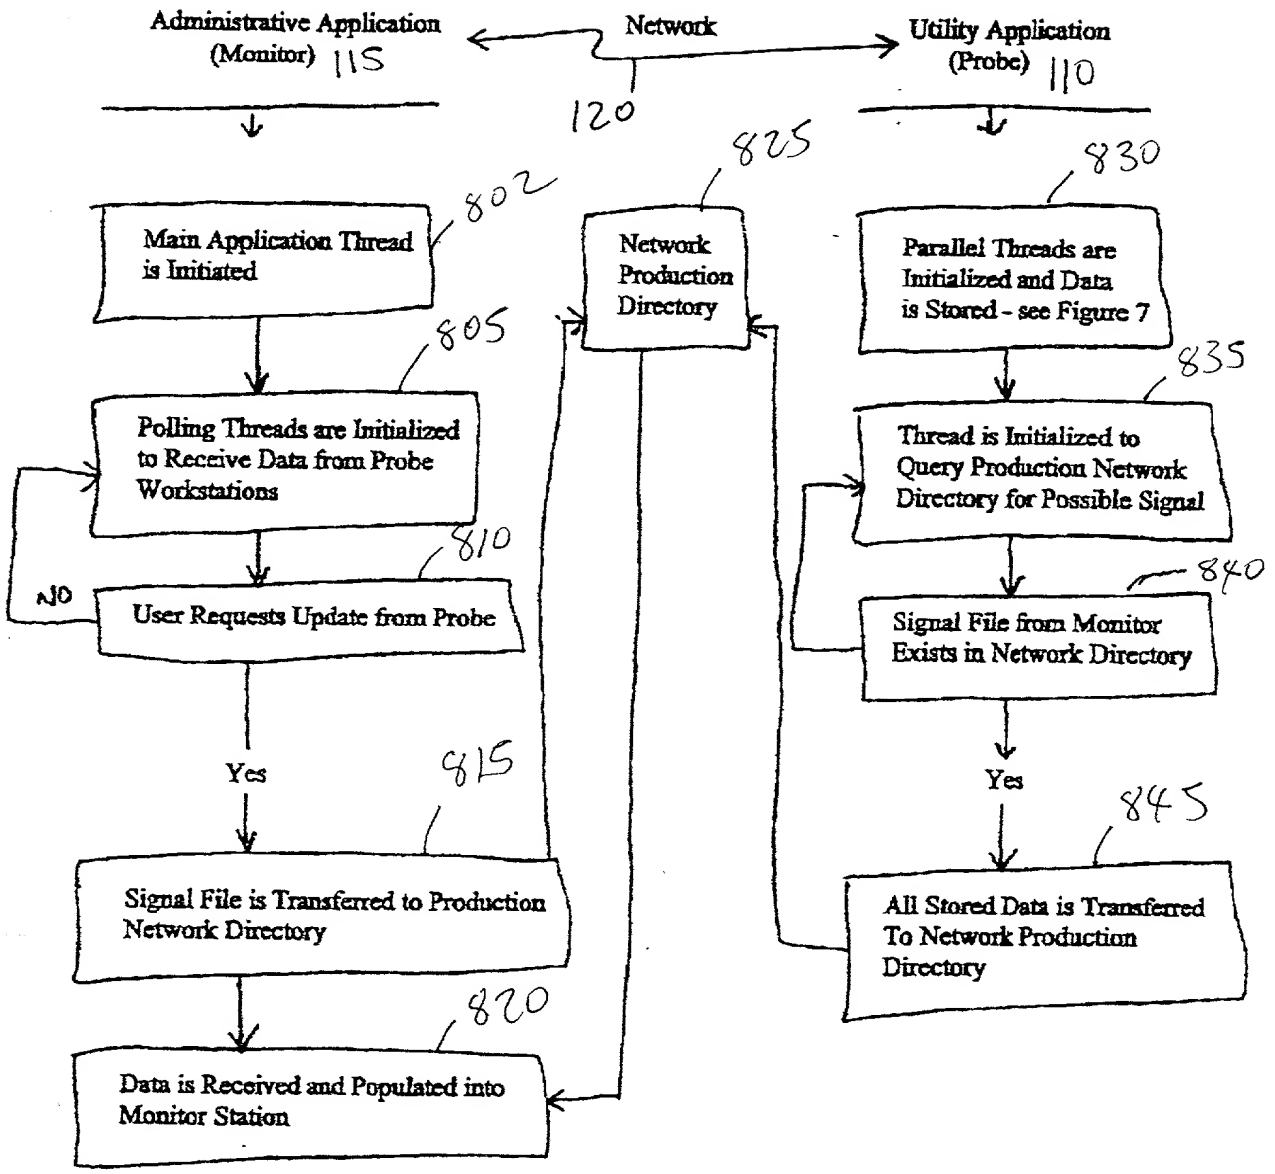
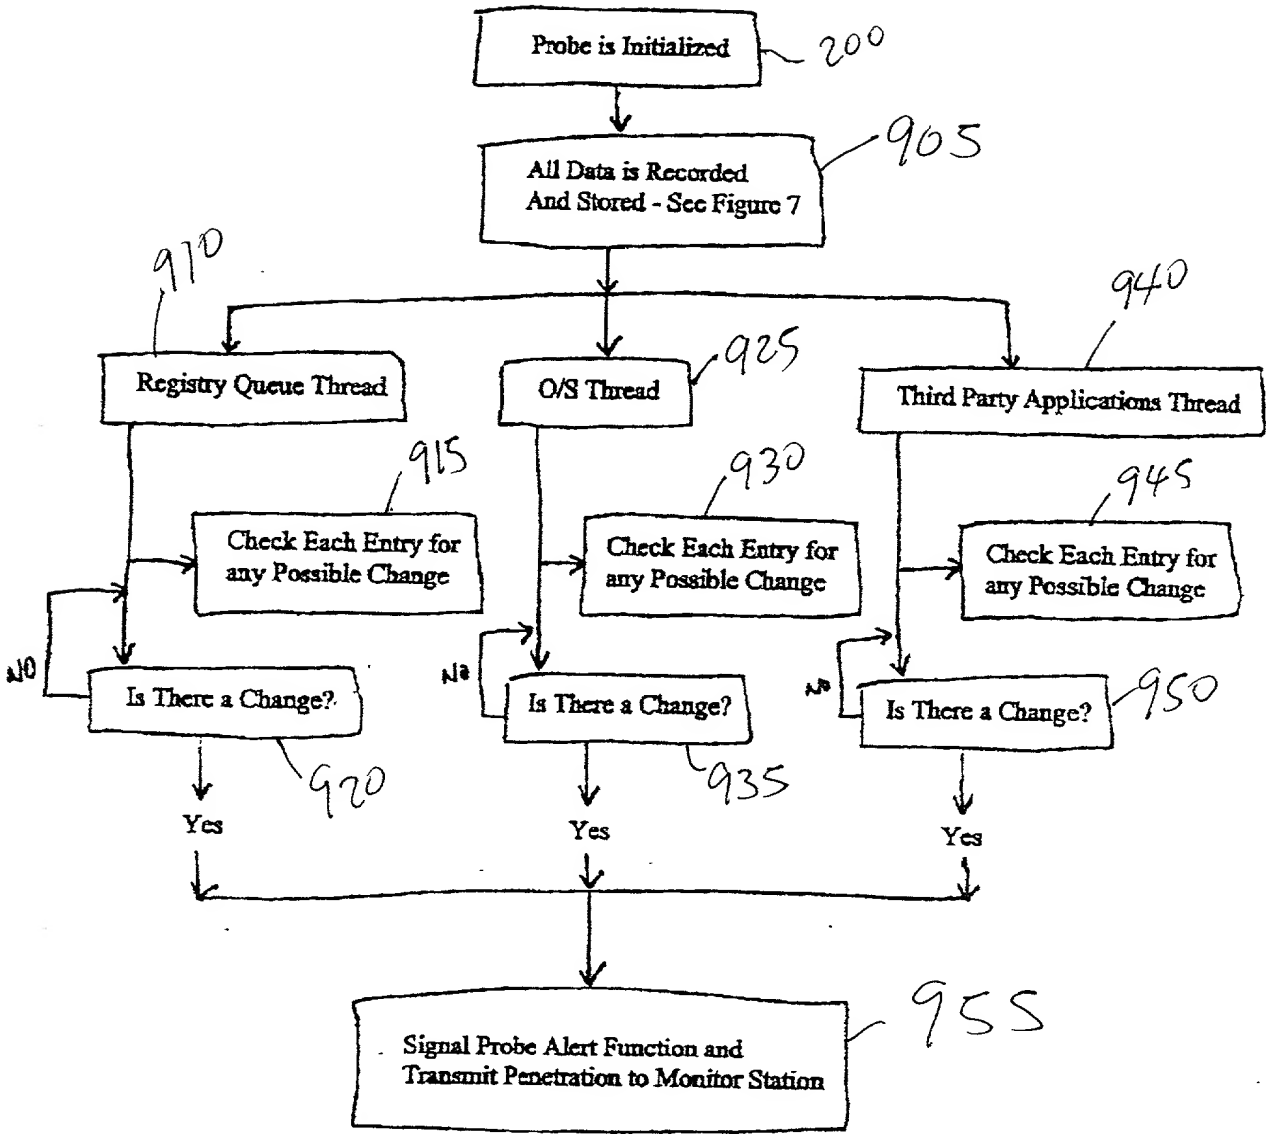
725
Map Start-Up Directory to ASC File
730a
All ".ini" Files into ASC File
730b
Files are Stored into Nest Sub-Directory for Probe Retrieval and Update
740
Has a Signal Been Received to Transfer Data To Monitor Station?
745
yes
Transfer Data
750

FIG. 7



Administrative Application (Monitor) 115
Network
120
Utility Application (Probe) 110
802
Main Application Thread is Initiated
805
Polling Threads are Initialized to Receive Data from Probe Workstations
810
User Requests Update from Probe
No
Yes
815
Signal File is Transferred to Production Network Directory
820
Data is Received and Populated into Monitor Station
825
Network Production Directory
830
Parallel Threads are Initialized and Data is Stored - see Figure 7
835
Thread is Initialized to Query Production Network Directory for Possible Signal
840
Signal File from Monitor Exists in Network Directory
Yes
845
All Stored Data is Transferred To Network Production Directory

FIG. 8



Probe is Initialized
